Savi® Consignment Management
Specialized solution for tracking consignment movements between Allied defense forces

AT A GLANCE

- Savi Consignment Management answers the question "How can I maintain inventory visibility across joint Allied operations and ensure in-theater troops have adequate supplies?"

- Improves visibility of consignments and inventory across joint Allied operations

- Leverages AIDC technology for automated, real-time data on the location and condition of your assets

- Includes SOA-based Web Services Framework to facilitate integration with other enterprise systems

How do you know when a consignment has arrived at its destination?

How do you monitor inventory levels and resupply troops in the field?

When you redeploy, how do you locate and prioritze assets for return?

Savi Consignment Management enables defense organizations to improve consignment visibility and item traceability through real-time tracking of movements via Automatic Identification & Data Capture (AIDC) technologies such as bar code, RFID, GPS and sensors.

### Key value drivers of Savi Consignment Management include:

- Centralized inventory management of Allied forces: Provides centralized reporting on all consignment and asset locations across all allies by leveraging the STANAG interoperability standards between Allied nations.
- Monitoring of inventory levels in the field: Alerts supply chain managers when supply levels in the field run low.
- Localized inventory reports in the field: Allows troops in the field to view online consignment and asset reports. Individual consignment manifests can also be accessed by reading the individual RFID tags.
- Managing the redeployment of assets: Provides prioritized inventory reports specifying which assets need to move first.

In summary, Savi Consignment Management answers the questions, "How can I maintain inventory visibility across joint Allied operations and ensure in-theater troops have adequate supplies?"

Savi Consignment Management's Integrated Offering

Savi Consignment Management distinguishes itself by taking a solution oriented approach. Savi brings an integrated offering that starts with the consignment and ends with the right business decision.

- **Automated Data Capture** Savi Consignment is part of a solution suite that includes Savi Site Manager, Savi Mobile and Savi Workstation products. These Savi products manage your AIDC network and offer an automated means for staying up to date on the location and condition of your consignments.

- **Legacy Integration** The ability to exchange data with other systems plays a critical role in assessing the big picture. Savi Consignment Management includes a Service Oriented Architecture (SOA) Web Service Framework that facilitates integration through a standardized, flexible approach.

- **Business Intelligence** Ultimately, information must be conveyed to supply chain managers, asset owners and other decision makers. Savi Consignment Management provides a dashboard summary of reports and alerts along with the capability to customize user interfaces, reports and alerting criteria.

Savi® Consignment Management

Customers who implement Savi Consignment Management experience a wide variety of improvements in their operations. The chart below depicts a high-level overview of these improvements.

BEFORE Savi Consignment Management	AFTER Savi Consignment Management
Missing/inaccurate data on consignment location	100% accurate location data on consignments
Consignment location data captured manually	Automated capture of consignment location data
Labor hours expended to search for consignments	Less time spent searching for consignments
Time-consuming manual inventorying	Faster, easier automated inventory
Lack of data on consignment environmental condition	Automated environmental alerts
Manual monitoring of consignment environmental condition	Environmental monitoring automated
Inaccurate data on consignment movements	Accurate, real-time data on consignment movements
No way to see complete history of consignment	Instant reports show consignment history
Disparate software systems hold supply chain data	Consignment Management integrates disparate systems

More About Savi Consignment Management

Savi Consignment Management brings an integrated approach to managing assets, inventory and shipments within facilities and throughout the global supply chain. Building on 24 years of Commercial and Government experience, Savi knows how to improve supply chain operations and capture savings against your organization's bottom line.

Savi provides easy-to-use, decision-support software enhanced by AIDC technologies such as bar code, RFID, GPS, sensors and satellite systems. This drives "just-in-time" operations by providing decision makers with quality, near real-time information about the location, condition and security of their assets and consignments.
